This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-7   (Cancelled).

8.   (Previously Amended) A method of generating a background image for a television, the method comprising:

(a)   receiving a broadcast signal including video data;

(b)   converting the broadcast signal to a television input signal;

(c)   transmitting the television input signal to a television;

(d)   receiving a first user-generated capture command;

(e)   in response to (d), storing a first picture frame into a non-volatile memory;

(f)   dividing the first picture frame into a plurality of sections; and

(g)   generating a second picture frame having each of the plurality of sections in a location that does not correspond to the location of the section in the first picture frame.

9.   (Original) The method of claim 8, further including:

(h)   converting the second picture frame to a television frame input signal; and

(i)   transmitting the television frame input signal to a television.

10.   (Original) The method of claim 9, further including:

(j)   receiving an input signal from a user indicating an arrangement of the plurality of sections.

11.   (Original) The method of claim 10, further including:

(k)   in response to (j) generating a third picture frame having the plurality of sections in locations determined by the input signal.

12.-13. (Cancelled)

14.   (Original) A method of generating an event sound for a digital broadcast receiver, the method comprising:

(a)   receiving a broadcast signal including a digital audio stream;

(b)   receiving a user-generated capture command;

    (c)   in response to (b), storing a portion of the digital audio stream in a memory;

    (d)   receiving information that associates an event and the portion of the digital audio stream; and

    (e)   retrieving the portion of the digital audio stream from the memory when the event takes places.

15.   (Original) The method of claim 14, wherein the event comprises the startup of the digital broadcast receiver.

16.   (Original) The method of claim 14, wherein the event comprises the selection of an icon on a user interface.

17.   (Original) The method of claim 14, wherein the event comprises a time of day.

18.   (Original) The method of claim 14, wherein the event comprises the shutdown of the digital broadcast receiver.

19.-21   (Cancelled)

22.   (Original) A computer-readable medium having computer-executable instructions for performing the steps comprising:

    (a)   receiving a broadcast signal including a digital audio stream;

    (b)   receiving a user-generated capture command;

    (c)   in response to (b), storing a portion of the digital audio stream in a memory;

    (d)   receiving information that associates an event and the portion of the digital audio stream; and

    (e)   retrieving the portion of the digital audio stream from the memory when the event takes places.

23.   (Cancelled)

24.   (Original) A digital broadcast receiver comprising:

a central processing unit;

a memory module coupled to the central processing unit and containing computer-executable instructions that causes the receiver to perform the steps of:

(a)   receiving a broadcast signal including video and audio data;

(b)   converting the broadcast signal to a television input signal;

(c)   transmitting the television input signal to a television;

(d)   receiving a first user-generated capture command during (c);

(e)   in response to (d), storing a first picture frame in a memory;

(f)   dividing the first picture frame into a plurality of sections;

(g)   generating a second picture frame having each of the plurality of sections in a location that does not correspond to the location of the section in the first picture frame;

(h)   receiving a second user-generated capture command;

(i)   in response to (h), storing a portion of the digital audio data in a memory;

(j)   receiving information that associates an event and the portion of the digital audio data;

(k)   retrieving the portion of the digital audio data from the memory when the event takes places; and

an interface module for coupling the receiver to a computer device.

25.-34   (Cancelled)
